RABIES

(Goshen) – A cat found wild in the Town of Wawayanda recently was tested and found to have rabies. All known contacts have been treated and the municipality has been informed.

The public is again reminded NOT to touch wild animals including cats, **alive** or **dead**. Kittens and other young animals are very appealing but rabies is DEADLY. Please question your child about any contact with wild kittens or other animals.

If you were bitten or scratched by a stray cat or kitten particularly in the area of Lippert Drive and Ryerson Road please call the Orange County Department of Health at (845) 291-2332.
